#### **Rationale:**

Soil serves as the natural media for plant growth. The maintenance of Soil fertility is essential to cater the food needs for ever increasing population. It is essential for a diploma student to know about the modern scientific knowledge about physical and chemical properties of soil.

**Objective:** 

- The course is designed with following objectives:
- to know about soil and soil formation
- to know about physical properties of soil
- to know about soil constituents
- to know about problem soils and principles of their management
- to develop knowledge about engineering properties of soil

	Contents : Theory	Hrs/week	Marks

**Rationale:** 

Drawing is the language of engineers. Without the knowledge and skill of drawing an Agricultural Engineering Diploma Holder becomes handicapped in understanding the problems right from design state of machine components to the production.

This subject will develop the understanding of drawing, representation of machine parts. The subject will help a technician in understanding the functioning of different machine, which will help in maintenance, dismantling and assembly of machines used in agricultural farms, food processing, production process etc. This subject will develop the skill of communication through drawing which in turn will develop confidence.

#### **Objective:**

The students will be able to:

- Understand screw threads and its characteristics representation
- Understand the fastening types and its representation
- Understand the different types of joints used and its representation can get the ability to understand the different types of power coupling used in farm machinery and its representation
- Can develop the ability to represent the agricultural machine parts, machining components by free hand sketch
- Develop overall drawing and drafting skill in practical fields.

**Rationale and Objective:** 

A Diploma student of Agricultural Engineering has to perform his job related to fetch water in the field by different types. The knowledge of fluid characteristics and its related parameter is must for the students.

This course of Hydraulics and Fluid Mechanics is designed to cover the fluid properties, fluid statics and

dynamics, its flow characteristics in closed condute and open channel with weirs and various aspect that are useful in project planning & execution work.

The curriculum has been divided into the following topics:

	Contents : Theory	Hrs/week	Marks
Unit -1	<b>PROPERTIES OF FLUIDS:</b> Density, Specific Weight, Specific Volume, Specific Gravity, Viscosity, Dynamic Viscosity, Kinematic Viscosity, Cohesion, Adhesion, Surface Tension, Capillarity, thermodynamic properties.	[03]	[03]
Unit -2	MEASUREMENT OF PRESSURE: Pressure, Pascal's Law of Fluid Pressure at a point, Pressure head, Transmissibility of liquid pressure, Bramah's process OR Hydraulic press, Atmospheric pressure, Negative pressure OR vacuum pressure, pressure gauge and manometers, the barometer, the one reid barometer, the siphon barometer, the piezo meter-U- tube OR Double column manometer, Inverted U-tube manometer, Measurement of Suction pressure OR Negative pressure, Sensitive manometers, Single column, Inclined tube manometer, the bourdon gauge, the diaphram pressure gauge, Micro manometer.	[04]	[08]
Unit -3	<b>HYDROSTATIC PRESSURE ON SURFACES:</b> Total pressure on a lamina immersed in a liquid, center of pressure, the hydrostatic paradox, pressure force on vertical and inclined laminae, pressure on curved surfaces, pressure on lock gates, pressures on a masonry dam, stability of dam, minimum bottom with required for a dam.	[03]	[05]
Unit -4	<b>BUOYANCY AND FLOATATION:</b> Buoyancy, Archimedes principle, Centre of buoyancy, body immersed in two different fluids, Meta Centre, Metacentric height, stable, unstable and neutral equilibrium.	[03]	[05]
Unit -5	<b>HYDROKINEMATICS:</b> Introduction, method of describing fluid motion, streamline, pathline, streak line, stream tube, potential line, types of flow, laminar & turbulent, steady & unsteady flow, uniform and non-uniform flow, rotational and irrotational flow, various types of fluid movements. Reynolds number, Froud number and webber number. Equation of continuity for one-dimensional steady flow.	[04]	[05]
Unit -6	<b>DYNAMICS OF FLUID FLOW:</b> Energy possessed by fluid body potential energy and potential head, pressure energy and pressure head, kinetic energy and kinetic head, the energy equation, Bernoulli's theorem, Euler's equation of motion, Inter conversion of potential pressure and kinetic heads, kinetic energy correction factor, momentum equation, rate of change of momentum, central volume, the venturimeter, the venturi head, pitot tube, orifice plate or orifice metre, the flow nozzle.	[03]	[08]
Unit -7	<b>ORIFICES</b> AND MOUTH PIECES: Orifices, small and large orifices, circular & rectangular orifices, sharp edge and bell mouthed orifices, Vena contracta, coefficient of orifices, coefficient of contraction, coefficient of velocity and coefficient of discharge, submerged orifice, large orifice, loss of head due to sudden enlargement, loss of head due to sudden contraction, mouth piece, convergent, divergent mouth piece.	[03]	[08]

	Total	42	70
Unit -11	<b>PUMPS:</b> Pumps and its types, Centrifugal pump, method of converting the kinetic energy of water leaving the impeller into pressure energy, the volute chamber, the vertex or the whirlpool chamber, guide blades minimum speed to start the pump, loss of head due to reduced or increased flow. Principles of similarity applied to centrifugal pumps. Characteristics curves.	[04]	[07]
Unit -10	<b>FLOW THROUGH OPEN CHANNELS:</b> Types of channels: Rectangular, trapezoidal and circular channels; Opened covered channels, steady and unsteady flow in a channel. Chezy's formula, Kuttur's formula, Manning formula, Hydraulic mean depth or radius, Most efficient section, Specific energy head, Critical depth, critical velocity, Hydraulic jump or standing wave. Condition on which the hydraulic jump will occur. Back water curve, Channel with mild, steep, critical slope.	[06]	[08]
Unit -9	<b>FLOW THROUGH PIPES:</b> Laws of fluid friction, loss of head due to pipe friction, Darcy-Weir back formula, Hydraulic gradient, Total energy line, pipes in series, pipes in parallel, Dupuits equation, loss of head in tapering pipe with nozzle.	[06]	[08]
Unit -8	<b>NOTCHES &amp; WEIRS:</b> Difference between notch and weir, Nappe or vein, crest or sill of a notch, classification of weirs, rectangular weir, triangular weir, trape zanidal weir, weir with end contraction. Submerged weir – Anicut raised weir, barrage, broad crested weir, ogee weir, cipolleti weir.	[03]	[05]

#### **Rationale & Objective:**

A Diploma holder technician in Agricultural Engineering must know the operations control, maintenance and repairing idea of different sources of power used in Agricultural sector. For proper utilization of agricultural machinery, processing equipments in agricultural FARM and FIRM with safety for stationary & mobile engines, this course is designed with following contents:

- Idea of conventional animal, human, coal, fuel and non-conventional solar and wind power sources of energy used in agricultural sector
- Scope of mechanization, its availability and suitability in Indian condition. Principle of operation of different engines
- Different Engines system
- Different engine components, different control devices repair, maintenance & safety devices of engines
- Power estimation and power losses
- Introduction of mobile engines and tractors

# WORKSHOP TECHNOLOGY

#### **Rationale:**

Workshop technology deals with different processes by which component of a machine or equipments are made, objectives of Agricultural Engineering Diploma holders will have to deal with different types of machines and tractors, so they are supposed to know different processes in workshop. keeping this in view, this subject has been included in the curriculum.

## FARM POWER AND TRACTOR LAB

Rationale:

A Diploma holder in Agricultural Engineering student has to operate the different machinery with I.C. Engine power source for stationary & moving process.

**Objective:** 

The present practical course is designed to familiarise the different components of the I.C. engine as well as to provide well practice over the different control units of the stationary and moving engine operation with safety.

At least **<u>Eight</u>** experiments to be done from the following list of experiments:

	Contents : Practical	Hrs/week	Marks
Unit -1	- Familiarisation with different engine parts viz. stationary, reciprocating and rotating.	[04]	
Unit -2	- Study of two stroke and four stroke cycle engine.	[04]	
Unit -3	- Study of valves and valves arrangement. Determination of valve timing and firing orders of multi-cylinder engine	[04]	
Unit -4	- Familiarization with carburettors adjustment and air supply system.	[04]	
Unit -5	- Diesel fuel supply system, injector adjustments and air bleeding	[04]	
Unit -6	- Study of cooling system in stationary engines and moving engines like tractor.	[04]	
Unit -7	- Study of lubricating system.	[04]	
Unit -8	- Study of operation of power tillers.	[04]	
Unit -9	<ul> <li>Familiarisation with different controls on the tractor and indicators with traffic signals.</li> </ul>	[04]

**Rationale:** 

Drawing is the language of engineers. Without the knowledge and skill of drawing an Agricultural Engineering Diploma Holder becomes handicapped in understanding the problems right from design state of machine components to the production.

This subject will develop the understanding of drawing, representation of machine parts. The subject will help a technician in understanding the functioning of different machine parts which will help in maintenance, dismantling and assembly of machines parts from machinery & food process machines parts during its production process too. This subject will develop confidence and will improve the ability of concept.

### **Objective:**

The students will be able to:

- Understand screw threads and its characteristics representation
- Understand the fastening types and its representation
- Understand the different types of joints used and its representation
- Can get the ability to understand the different types of power coupling used in farm machinery and its representation
- Can develop the ability to represent the agricultural machinery components by free hand sketch
- Develop drafting skill and be able to apply the knowledge & skill of drawing in practical field.

#### **Rationale:**

An Agricultural Engineering Diploma student is required to know about soil structure and texture. He has to apply

engineering and technology in agricultural operation in a better way to improve productivity.

#### **Objective:**

The course is designed with following objectives:

- to understand about soil science and soil mechanics and its relation with crop production
- to know about soil pH, soil classification, method of sample taking etc.
- to develop skill about engineering properties of soil.

#### At least **Seven** sessional units must be carried out by the students.

Rationale:

The course on History of Architecture develops appreciation regarding past and current trends in the field of architecture. The knowledge of this course will help the students to understand how political, physical, social, economical and technological change affects the architecture, materials and construction techniques. The course covers broad topics like: pre-historic architecture, important civilizations (Indian, Egyptian, Greek and Roman), medieval architecture in Europe and temple architecture and Buddhist architecture in India.

The teacher should try to create interest among the students for this course by organizing site visits to the local old monuments. Audio-visual aids should also be used to explain various architectural developments. While imparting instructions, teachers should stress upon the context of form and space, construction methods structural systems and materials. The teacher should motivate the students to take general reference for form, drawings, structural solutions and materials from the history while designing their project.

Students of Architectural Assistantship at diploma level are expected to prepare working drawings of various fittings and fixtures and water supply and sanitary installations. Also students should be well conversant with electrical and mechanical installations in the buildings. For this purpose, it is essential that the students are taught various aspects of building services like: sanitation, domestic water supply, electrical layout and air conditioning. Therefore, the subject of building services is very important for students undergoing diploma courses in Architectural Assistantship.

### **Objectives:**

The student will be able to: -

Students of Architectural Assistantship at the diploma level are expected to know, design and execute building interiors. Therefore, the basic knowledge of building construction and detailed knowledge of building materials is required. With the knowledge of this subject the students can help in handling interior projects from the concept stage to the project implementation stage. Also this exercise is necessary since the interiors are becoming more integral part of architecture and considerable stress is being laid in interior design.

Teachers while imparting instructions are expected to explain concepts and principles introducing various building finishing materials. The course would be supplemented with literature and samples of materials.

Unit -1	Fundamentals and types of Mechanisms:-		
	<ol> <li>1.1 Kinematics of Machines: - Definition of Kinematics, Dynamics, Statics, Kinetics, Kinematic link, Kinematic Pair and its types, constrained motion and its types, Kinematic chain and its types, Mechanism, inversion, machine and structure.</li> <li>1.2 Inversions of Kinematic Chain.</li> <li>1.2.1 Inversion of four bar chain, coupled wheels of Locomotive &amp; Pentograph.</li> <li>1.2.2 Inversion of Single Slider Crank chain- Rotary I.C. Engines mechanism, Whitworth quick return mechanism, Crank and Slotted lever quick return mechanism.</li> </ol>	08	15
	<ul> <li>1.2.3 Inversion of Double Slider Crank Chain- Scotch Yoke Mechanism &amp; Oldham's Coupling.</li> <li>1.3 Common Mechanisms <ol> <li>1.3.1 Bicycle free wheel Sprocket mechanism.</li> <li>1.3.2 Geneva Mechanism.</li> <li>1.3.3 Ackerman's Steering gear mechanism.</li> <li>1.3.4 Foot operated air pump mechanism.</li> </ol> </li> </ul>		
Unit -2	<ul> <li>Velocity and Acceleration in Mechanism:-</li> <li>2.1 Concept of relative velocity and relative acceleration of a point on link, angular velocity and angular acceleration, inter- relation between linear and angular velocity and acceleration.</li> <li>2.2 Drawing of velocity and acceleration diagram of a given configuration, diagrams of simple mechanisms. Determination of velocity and acceleration of a point on link by relative velocity method [Excluding coriollis components of acceleration].</li> <li>2.3 Analytical method [no derivation] and Klein's construction to determine velocity and acceleration of different links in single slider crank mechanism.</li> </ul>	06	09
Unit – 3	<ul> <li>Cams and Followers:-</li> <li>3.1 Concept, definition and application of Cams and Followers.</li> <li>3.2 Classification of Cams and Followers.</li> <li>3.3 Different follower motions and their displacement diagrams like uniform velocity, SHM, uniform acceleration and Retardation.</li> <li>3.4 Drawing of profile of radial cam with knife-edge and roller follower with and without offset with reciprocating motion (graphical method)</li> </ul>	04	08
Unit – 4	<ul> <li>Power Transmission:-</li> <li>4.1 Types of Drives – Belt, Chain, Rope, Gear drives &amp; their comparison.</li> <li>4.2 Belt Drives – flat belt, V– belt &amp; its applications, material for flat and V- belt, angle of lap, belt length. Slip and creep. Determination of velocity ratio, ratio of tight side and slack side tension, centrifugal tension and initial tension, condition for maximum power transmission(Simple 133umerical)</li> <li>4.3 Chain Drives – Advantages &amp; Disadvantages, Selection of Chain &amp; Sprocket wheels, methods of lubrication.</li> <li>4.4 Gear Drives – Spur gear terminology, types of gears and gear trains, their selection for different application, train value &amp; Velocity ratio for compound, reverted and simple epicyclic gear train, methods of lubrication, Law of gearing.</li> <li>4.5 Rope Drives – Types, applications, advantages &amp; limitations of Steel ropes.</li> </ul>	12	14

Unit – 5	<ul> <li>Flywheel and Governors:-</li> <li>1.1 Flywheel – Concept, function and application of flywheel with the help of turning moment diagram for single cylinder 4-S I.C. Engine (no Numericals). Coefficient of fluctuation of energy, coefficient of fluctuation of speed and its significance.</li> <li>1.2 Governors – Types, concept, function and application &amp; Terminology of Governors.</li> <li>1.3 Comparison between Flywheel and Governor.</li> </ul>	05	06
Unit – 6	<ul> <li>Brakes, Dynamometers, Clutches &amp; Bearings:-</li> <li>6.1 Function of brakes and dynamometer, types of brakes and Dynamometers, comparison between brakes and dynamometer.</li> <li>6.2 Construction and working of i) shoe brake, ii) Band Brake, iii) Internal expanding shoe brake iv) Disc Brake.</li> <li>6.3 Concept of Self Locking &amp; Self energizing brakes.</li> <li>6.4 Numerical problems to find braking force and braking torque for shoe &amp; band brake.</li> <li>6.5 Construction and working of i) Rope Brake Dynamometer, ii) Hydraulic Dynamometer, iii) Eddy current Dynamometer.</li> <li>6.6 Clutches- Uniform pressure and Uniform Wear theories.</li> <li>6.7 Function of Clutch and its application, Construction and working of i) Single plate clutch, ii) Multiplate clutch, iii) Centrifugal Clutch iv) Cone clutch v) Diaphragm clutch. (Simple 134umerical on single and Multiplate clutch).</li> <li>6.8 Bearings – i) Simple Pivot, ii) Collar Bearing, iii) Conical pivot. Torque &amp; nower lost in friction (no derivation).</li> </ul>	10	14
Unit – 7	<ul> <li>Balancing &amp; Vibrations:-</li> <li>7.1 Concept of balancing. Balancing of single rotating mass. Graphical method for balancing of several masses revolving in same plane.</li> <li>7.2 Concept and terminology used in vibration, causes of vibrations in machines, their harmful effects and remedies.</li> </ul>	03	04

### **CONTENTS: PRACTICAL**

### Practical: **Skills to be developed**:

### Intellectual Skill :

- 1) Understand different sources of energy and their applications.
- 2) Understand various concepts and fundamentals of thermodynamics.
- 3) Understand concepts and laws of ideal gasses.
- 4) Understand vapour processes, steam boilers and different mountings and accessories.
- 5) Understand modes of heat transfer and concept of heat exchanges.
- 6) Interpret steam tables, mollier chart and relationship between different thermodynamic properties.

### Motor Skills :

- 3) Collect and write technical specifications of photovoltaic cells and identify different components on panels of photovoltaic cells.
- 4) Conduct trial on the setup for calculation of thermal conductivity of metal rod
- 5) Trace path of flue gases and water steam circuit in a boiler.
- 6) Conduct trial on solar water heating system.

### List of practical:

- Collection of technical data and specification of photovoltaic cell by referring to manufacturers' catalogues.
- Study and Trial on solar water heating system.
- Report on visit to wind power generation plant / biogas plant / hydraulic power plant.
- Trace the flue gas path and water-steam circuit with the help of boiler model and write a report.
- Report on visit to sugar factory / Dairy / steam power plant with specifications of boiler and list of mountings and accessories.
- Calculation of thermal conductivity of a solid metallic rod.
- Verification of Stefan-Boltzman's law
- Study and compare various heat exchangers such as radiators, evaporators, condensers, plate heat exchangers etc.

Numericals on vapour processes and ideal gas processes (minimum two problems on each)

### **Motor Skills:**

- 1. Use flow measuring device.
- 2. Use pressure measuring device.
- 3. Operate pumps and turbines.

### List of Practical:

- 1. Calibration of Bourden pressure gauge with the help of Dead Weight Pressure gauge.
- 2. Verification of Bernoulli's Theorem.
- 3. Determination of Coefficient of Discharge of Venturimeter.
- 4. Determination of Coefficient of Discharge, coefficient of contraction and coefficient of velocity of

orifice meter.

- 5. Determination of coefficient of friction of flow through pipes.
- 6. Trial on Pelton wheel to determine overall efficiency.
- 7. Trial on centrifugal pump to determine overall efficiency.
- 8. Trial on reciprocating pump to determine overall efficiency.

List :

- 1) Electric welding/Gas welding jobs.
- 2) Industrial visit to observe plastic processing shop and report on the visit.
- 3) One job on lathe containing the operations like plain turning, threading, boring, taper turning.
- One job on CNC lathe containing the operations like plain turning, taper turning and curvature. (Group of two students, each group must use different program for different job dimensions)
- 5) One job containing drilling, milling, reaming, gear cutting (spur gear) per job max. two students.
- 6) One job containing surface grinding / cylindrical grinding for tolerances
  - ± 30 micron,( For the job already made on milling machine /lathe).
- One assignment on accessories & attachment chucks, mandrels, carrier and catch plates rests, face plate and angle plate, grinding attachment used on lathe.
- 8) One assignment on accessories & attachment, work holding & tool holding devises used on milling machine.
- 9) One assignment each on shaper, planer, boring machine, broaching machine.

**RATIONALE:** Today's fashion industry is versatile and rapidly changing in trends and therefore quick response of production is very much essential. Flat pattern technique and Draping are the most important techniques employed in fashion garment industry since its inception. Therefore, a steep demand of professional and technically educated workforce of advanced pattern designing is one of the basic human resources of garment production industry. Aim of introducing this subject is to prepare students with a professional approach of flat pattern and draping techniques, relevant to today's fashion garment making industry. Introduction of this course is a step forward in educating students in synchronization with the needs of today's garment industry.

**RATIONALE:** This course forms the basis for drawing garments on human figures. It emphasizes the basic silhouettes. The knowledge of different type of human figures enables the designers to design appropriate costumes. There is great demand of professionals in the market who can design garments for different human figures. The focus of the course is on development of skills in the student to apply principles and elements of design for garment design in industry. The course Art and design is prerequisite for this course.

**Objectives:** Students will be able to:

- i. Design appropriate garment using principles and elements of design for given human figure.
- ii. To develop ability in students to prepare in ligneous designs.
- iii. To impart knowledge on human anatomy.
- iv. To impart knowledge about model figure, fashion figure.
- v. To impart knowledge of various figure types.
- vi. To develop rendering knowledge and tools used for fashion drawing.

**RATIONALE:** This course helps in understanding concept of fashion and the factors that affect fashion. It enables the students to familiarize with fashion terminology. Understanding of the fashion trends is must for garment designers to make their designs acceptable in market. Every costume designer should know about fashion and latest fashion trends if he/she wants his/her products to be appreciated by the consumers. This course therefore helps the students to familiarize with fashion capitals, fashion brands, fashion designers and consumer segmentations in order to understand the nuance of fashion as a global phenomenon affecting lifestyle and commerce. This will help to keep themselves updated with knowledge and developments in fashion world. Thus this is a very important course for students of CDGT programme.

**Objectives:** The course content should be taught and curriculum should be implemented with the aim to develop required skills in the students so that they are able to acquire following competency:

- 1. Apply appropriate element and principles of fashion in given situation.
- 2. Gain knowledge about the national and international fashion scenario affecting life style and commerce.
- 3. Appreciate the influence of style icons on fashion across the globe.
- 4. Explain unique selling preposition 'USP' and signature style of important fashion designers across the world.
- 5. Explain principle and intangible of fashion.

**RATIONALE:** This course will provide basic knowledge, origin, history, design elements and material and methods used for textile in northern, southern, eastern and western region of India. The knowledge and skills provided by this course would help in designing and making garments for different regions of India as per local needs/customs/traditions and would also help in creating new designs by fusion of features of traditional designs of different parts of India.

**Objectives:** The students will able to:

i. Describe the different historical/ traditional textile and their origin.

ii. Apply appropriate traditional textile crafts in given situations. CONTENTS : THEORY

**RATIONALE:** This course will provide proficiency in upper and lower garments for children, males & females. The skills to be acquired by this course would help diploma pass outs in planning and supervising operations in industry efficiently and maintaining the quality of products. Students therefore should try to master these skills. This course will develop the requisite skills in the students for preparing fashioned garments at par with the industry.

**Objectives:** Students will be able to:

i. Design, cut &stitch the upper garments for males & females.

ii. Design, cut &stitch varieties of skirts.

iii. Prepare lower garments for men and women as per requirement.

iv. Draft, cut and stitch basic trouser for women & men.

v. Draft, cut and stitch Indian bifurcated garment for women.

**RATIONALE:** This course will help students to learn about surface development of fabric for garment construction and development of garment through surface embellishment. It is useful for the students for embellishing the fabric in garment industry. Imbibed knowledge will be useful for preparing fashioned garments.

**Objectives:** Students will be able to:

i. Embellish fabric using suitable embroidery technique.

ii. Apply different printing technique for embellishment of garments and fabric.

iii. Select Crochet, macramé, Tatting and knitting technique for embellishment of accessories.

Geology is the science of Earth. The subject has been kept mainly to impart knowledge on Ceramic related Geological topics covering the history of Earth, plate tectonics, climates, rocks and minerals etc. These deals with Economic Geology besides various tests and equipment required to carry out those tests are also dealt within the subject.

### **OBJECTIVE:**

The objective is to:

- 01. Identify rocks and minerals by using Geological methods.
- 02. Know about classifications of Geology, Rocks, and Minerals.
- 03. Know about formation of Rock and weather effect on it.
- 04. Handle Petrological Microscope for analysis and identifications of minerals.

### **RATIONALE:**

Chemistry is important to be studied by Ceramic Engineers as it gives basic knowledge with fundamentals applicable in applied field of Technology. It deals with both physical and Industrial Chemistry. Theory is always backed by practice and so the basic knowledge of Chemistry helps in understanding manufacture and properties of ceramic products.

### **OBJECTIVE**:

The objective is to know about:

- 1. Fundamental Concept of Physical chemistry
- 2. Industrial value of Chemistry in Ceramic Engg.

### **RATIONALE:**

This subject deals Chemical Engineering applied in Ceramic Industries and so it is an important subject. The students are required to know various aspects of operations carried out in Ceramic industries such as heat transfer, size reduction, mixing and drying etc. It is Chemistry based science with application technology.

### **OBJECTIVE:**

- The objective is to know about:
  - 1. Flow of fluids.
  - 2. Size reduction and separation.
  - 3. Material handling to prepare ceramic body for shaping.
  - 4. Drying and the equipment used to carry out drying.
  - 5. Heat flow and losses.

#### **RATIONALE:**

Pottery is an important Ceramic Engineering subject dealing with forming a clay body in to objects of required shape. This is an ancient art work which was made by potters using local clay available there. It has transformed in to modern pottery products with developed technological inputs.

#### **OBJECTIVE**:

The objective is to know about:

- 1. Contemporary and Modern Pottery and Porcelain Products.
- 2. Raw Materials for pottery and porcelain.
- 3. Process of Manufacture for various Pottery and Porecelain Products.
- 4. Decorating and Glazing.
- 5. Plaster of Paris.

### **RATIONALE:**

Refractory Technology is an important subject which deals with heat resistant materials and products, refractory is an essential material used in all kind of furnaces and therefore knowledge of this technology is vital for the ceramic Engineers It also provides opportunity to know various Kilns/furnaces used in Ferrous and Non Ferrous industries besides its use in Ceramic industries.

### **OJECTIVE:**

The Objective is to know about:

- 1. Refractory and its classification.
- 2. Raw Materials and plant and Machinery.
- 3. Methods adopted in making Refractory along with the use of Dryers and Kilns used in Refractory Manufacture.

Unit -1	Importance of utilities :		
	Sources of water, hard and soft water2		
	1.1 Requisites of industrial water and its uses		
	1.2 Methods of water treatment		
	1.2.1 Chemical softening	06	10
	1.2.2 Demineralization SS	00	10
	1.3 Resins used for water softening		
	1.4 Reverse osmosis and membrane separation		
	1.5 Effects of impure boiler feed water & its treatments.		
	1.6.1 Scale & sludge formation		
	1.6.2 Corrosion		
	1.6.3 Priming & foaming		
	1.6.4 Caustic embrittlement.		
Unit -2	Refrigeration :		
	2.1 Refrigeration cycles		
	2.2 Different methods of refrigeration used in industry		
	2.2.1 Vapour compression		
	2.2.2 Vapour absorption: Lithium bromide

	1.4 Open and cross belt drivers.		
	1.5 Length of belt.	08	08
	1.6 Velocity ratio & slip.		
	1.7 Method of minimizing slip.		
	1.8 Chain drives Introduction.		
	1.9 Types of Chains.		
	1.10 Their selection and application.		
Unit -2	Gear drives Introduction		
	2.1 Types of Gear	08	10
	Spur, Helical, Bevel, Sprial & worm gear.		
	2.6 Terminology and fields of applications.		
	2.7 Number of teeth and speed ratio.		
	2.8 Simple, Compound & epicyclic gear train.		
	2.9 Reverted gear train.		
	2.10 Selection and application of speed ratio.		
	2.11 Simple problem involving Calculation of speed ratio.		
Unit - 3	Key & Couplings		
	3.1 Alignment of shafts.		
	3.2 Function & types of keys, coupling		
	3.2.1 Rigid (Sleeve, Clamp or Compression and Flange)	04	08
	3.2.2 Flexible (Bush type, Hook's joint & Oldham's)		
Unit – 4	Bearings		
	4.1 Classification		
	4.2 Sliding contact bearing.		
	4.3 Solid Journal bearing.		
	4.4 Bashed bearing.	04	08
	4.5 Split bearing & plummer block.

	5.1 Static seals.		
	5.2 Dynamic seals.		•
	5.3 Oil Seals.	04	04
	Mechanical seals & its Classification.		

Unit - 6	Welding, Soldering & Brazing		
	6.1 Welding.		
	6.1.1 Introduction.		
	Types of welding Processes: Gas welding principles & Processes (Oxy-		
	acetylene gas welding with equipment & techniques only.) Arc welding		
	principles & processes like carbon arc, submerged arc & TIG & MIG,		
	Resistance welding principle & processes like spot welding & seam welding.		
	6.1.2 Various types & application of welded joints.		
	6.1.3 Edge preparation for welding & prevention of distortion.		
	6.1.4 Basic weld symbols.	08	12
	Soldering.	08	12
	6.2.1 Introduction		
	6.2.2 Soft Soldering.		
	6.2.3 Hard soldering.		
	6.3 Brazing		
	6.3.1 Introduction		
	6.3.2 Types of Brazing.		
	6.3.3 Brazing Fluxes.		
	6.3.4 Advantages of Brazing.		
Unit – 7	Sheet Metal Work		
	7.1 Sheet Metals.		
	7.1.1 Ferrous & non Ferrous sheet Materials.		
	7.1.2 Composit sheet materials.	04	05
	7.1.3 General properties of sheet metals.	04	05
	7.1.4 Specification sheet metal gauge, hand tool's used.		
Unit – 8	Bending & Rolling.		
	8.1 Term associated with bending.		
	8.2 V-bending & U-bending		
	8.3 Bending Techniques.		
	8.4 Bending disc.	04	08
	8.5 Pipe & Conduit bending.		
	8.6 Manual & Power rolls.		
	8.7 Rolling Techniques.		
	8.8 Ring rolling & cone rolling.		
Unit - 9	Rivetted and Bolted Joints.		
	Standard rivets & rivet heads.		
	9.1.1 Types of riveted joints.		
	9.2 Types of bolts.		
	9.2.1 High strength Friction grip bolts.	04	07

# Skills to be developed: Intellectual Skills:

1. To select suitable process of manufacturing.

2. To select proper process condition for getting maximum yield.

#### Motor Skill:

1. To work on manufacturing plant.

2. To set proper temperature and pressure conditions

3. To handle reactor.

4. To set controlling steps in manufacturing process.

#### **List of Practicals:**

- 1. Estimation of strength of glacial acetic acid.
- 2. Analysis of paint, thinner, pigment.
- 3. Determination of iodine value of oil.
- 4. Determination of saponification value of oil.
- 5. Determination of acid value of oil.
- 6. Analysis of soap(moisture content)
- 7. Calculation of hiding power of paint.
- 8. Determination of Aniline point.
- 9. Preparation of red oxide.

#### LISTS OF Practical:

- 1. Determination of coefficient of discharge of venturi meter & plot a calibration curve
- 2. Determination of coefficient of discharge of orifice meter & plot a calibration curve
- 3. To calibrate a rotameter for different liquids & plot the calibration curve.
- 4. To perform experiment on Bernoulli's Theorem and prove that the summation of pressure head, kinetic head and potential head is constant.
- 5. To perform Reynolds Experiment and determine the Reynolds number at the end of laminar region and beginning of turbulent region.
- 6. To determination of equivalent length of pipe fittings
- 7. To plot the characteristics curves of centrifugal pump
- 8. To determine the relationship between Fanning's friction factor & Reynolds Number
- 9. To measure the viscosity of different liquids (Ostwald's Viscometer or Redwood Viscometer)
- 10. To measure the flow rate of gases using flow meter.

- 1. Select equipment such as motors, meters & components.
- 2. To interpret

#### circuits. Motor

#### Skills:

- 1. draw circuits
- 2. measure various parameters accurately
- 3. Make connection

#### List of Practicals:

#### SECTION –I Electrical Technology

- 1 Identify different parts of D.C. Machine with their Functions.
- 2 Control Speed of D.C. shunt Motor below & above normal speed.
- 3. Determine Voltage & current ratio of transformer.
- 4 No load test on  $1\phi$  transformer.
- 5 Brake test on 3φ Induction motor & find efficiency & torques

#### SECTION-II – Applied

#### Electronics

- 1. To Study the various laboratory equipments& measuring instruments like Power supply CRO, DMM.
- 2. To Study Diode Characteristics- Forward & Reverse characteristics.
- 3. To study Zener as a voltage regulator.
- 4. To study transistor as an amplifier- 2 stage RC coupled Amplifier.
- 5. Study of Logic gates.

Unit -1	Stress & Strain		
	<ol> <li>1.1 Definition of rigid body, plastic body, mechanical properties of metal such as elasticity &amp; elastic limit.</li> <li>1.2 Definition of stress, strain, modulus of elasticity, S. I. Unit. Classification of stress, strain, Sign convention. Stress, strain curve for mild steel and HYSD bar, yield stress/ proof stress, Ultimate stress, breaking stress and percentage elongation.</li> <li>1.3 Deformation of body due to axial load. Deformation of a Body subjected to axial forces. Deformation of body of stepped c/s due to axial load, max. stress and min. stress induced. Stresses in bars of composite section &amp; deformation.</li> <li>1.4 Shear stress, shear strain &amp; modulus of rigidity, complementary shear stress, state of simple shear, punching shear.</li> </ol>	10	10
Unit -2	Elastic Constants & Principal Stresses	08	10
	2.1 Definition of lateral strain, Poisson's ratio, Change in lateral	00	10
	dimensions		
	2.2 Volumetric strain due to uni-axial force and change in volume		
	change in volume		
	2.4 Definition of bulk modulus, volumetric strain.		
	2.5 Relation between modulus of elasticity, modulus of rigidity		
	and bulk modulus.		
	2.6 Definition of principal planes & principal stresses 2.7 Principal planes & stress due to bi-axial stress system & due		
	to state of simple shear. (Analytical method only)		
Unit – 3	Shear Force And Bending Moment :		
	3.1 Types of beams - cantilever, simply supported, fixed and		
	distributed load, support reactions for determinate structures		
	3.2 Concept of shear force and bending moment, sign	08	14
	convention.		
	Relation between bending moment, shear force and rate of		
	3.3 Shear force and bending moment diagrams for simply		
	supported		
	beams, overhanging beams and cantilever subjected to point		
	loads, UDL and couples, point of contra flexure		
Unit – 4	Moment Of Inertia:		
	4.1 Concept of moment of inertia M.I of plane areas such as		
	4.2 Parallel axis and perpendicular axis theorem MI of	06	10
	composite sections, built up sections, symmetrical and		
	unsymmetrical sections,		
	radius of gyration & polar moment of inertia.

Unit -1	<ul> <li>1.1 Definition of fluid, Difference in behavior of fluid with respect to solids. Introduction to fluid mechanics and hydraulics, Branches of hydraulics- Hydrostatics and hydrodynamics, Importance of Hydraulics with respect to Irrigation and Environmental engineering.</li> <li>1.2 Physical properties of fluid Mass density, Weight density, Specific volume, Specific gravity, Surface tension and capillarity, Compressibility, Viscosity, Newton's law of viscosity – Dynamic and kinematics viscosity. Ideal and Real liquids</li> </ul>	04	06
Unit -2	<ul> <li>HYDROSTATIC PRESSURE</li> <li>2.1 Free liquid surface, Definition of pressure and its SI unit Hydrostatic pressure at point, Pascal's law Variation of pressure in horizontal and vertical direction in static liquid Pressure diagram.</li> <li>2.2 Total hydrostatic pressure and center of pressure, Determination of total pressure &amp; center of pressure on vertical &amp; inclined faces of dams, sluice gates, sides and bottom of water tanks, Determination of total hydrostatics pressure &amp; center of pressure on sides and bottom of tank containing two liquids. Determination of net hydrostatic pressure and center of pressure on vertical surface in contact with liquid on either side. Numerical Problems.</li> </ul>	08	10
Unit – 3	<ul> <li>Measurement Of Liquid Pressure In Pipes         <ul> <li>Concept of pressure head and its unit,</li> <li>Conversion of pressure head of one liquid in to other devices for pressure measurements in pipes – Piezometer, U-tube manometer,</li> <li>Bourdon's pressure gauge. Principle of working and limitations.</li> <li>Measurement of pressure difference using differential manometer</li> <li>U-tube differential manometer and inverted U-tube differential manometer.</li> </ul> </li> </ul>	04	06
Unit – 4	<ul> <li>Fundamentals Of Fluid Flow</li> <li>4.1 Concept of flow, Gravity flow and pressure flow. Types of flow – steady and Unsteady, uniform and non-uniform , Laminar and turbulent. Various combinations of flow with practical examples, Reynolds number and its application, Stream line and equipotential line. Flow net and its uses</li> <li>4.2 Discharge and its units Continuity equation for fluid flow. Datum head, pressure head, velocity head and total head, Bernoulli's theorem, Loss of head and modified Bernoulli's theorem, Impulse momentum theorem Numerical Problems.</li> </ul>	06	08

Unit – 5	Flow Of Liquid Through Dings		
	<ul> <li>5.1 Loss of head due to friction, Darcy-Weisbach Equation Friction factor, relative roughness. Moody's diagram and its use. Common range of friction factor for different types of pipe material.</li> <li>5.2 Minor loss of head in pipe flow- loss of head due to sudden Contraction, sudden expansion, gradual contraction &amp; expansion, at entrance and exit of pipe in various pipe fittings. Pipes in series and parallel Equivalent pipe – Dupuit's equation</li> <li>5.3 Hydraulic gradient line and Energy gradient line, Siphon pipe. Water hammer in pipes – cause effects and remedial measures Use of Nomograms for design of water distribution system. Numerical</li> </ul>	07	10
Unit – 6	Flow Through Open Channel		
	<ul> <li>6.1 Types of channels- artificial &amp; natural, purposes of artificial channel, Different shapes of artificial channels Geometrical properties of channel section-wetted area, wetted Perimeter, hydraulics radius Prismatic channel sections, steady- uniform flow through prismatic channel section.</li> <li>6.2 Chezy's equation and Manning's equation for calculation of discharge through an open channel, common range of values of Chezy's constants and Manning's constant of different types of channel surfaces.</li> </ul>	07	14
	Most economical channel section, conditions for most economical channel sections. 6.3 Froud's number and its significance. Critical, sub-critical and supercritical flow in channel Hydraulic jump its occurrence in field.		
	uses of hydraulic jump.		
Unit – 7	Flow Measuring Devices		
	<ul> <li>7.1 Velocity measuring devices for open channels. Floats-surface, subsurface and float rod, Pitot tube – principle, expression for velocity Current meter-cup type &amp; propeller type</li> <li>7.2 Discharge measuring devices for channels, Notches -Types of notches, expression for discharge. ### **\$KILLS TO BE DEVELOPED:**

### INTELLECTUAL SKILL:

- 1) Identify the components of plane table, theodolite, and advanced survey instruments.
- 2) Know the working principles of these survey instruments.
- 3) Finding the horizontal and vertical distances.
- 4) Identifying errors in setting out curve and tabulating elements of a curve.

### **Motor Skills**:

- 1) Taking and recording the observation in the field book.
- 2) Preparing drawings, maps etc. with the observed data.
- 3) Setting out curve for the given alignment.
- 4) Use Micro optic thodolite, EDM for finding different parameters.

### Instructions:-

- 1) Group size for Practical work should be limited to maximum 6 Students.
- 2) Each student from the group should handle the instrument to understand. the function of different components and use of the instrument.
- 3) Drawing, plotting should be considered as part of practical.
- 4) One full day per project is required for carrying out project work, which is to be plotted on a drawing sheet.
- 5) **TERM WORK** SHOULD CONSIST OF RECORD OF ALL PRACTICALS AND PROJECTS, IN FIELD BOOK AND DRAWING SHEETS FOR THE GIVEN PROJECTS.

**LIST OF PRACTICAL:** (MINIMUM 12 PRACTICAL FROM LIST GIVEN BELOW)

- 1) USING ACCESSORIES CARRY OUT TEMPORARY ADJUSTMENTS OF PLANE TABLE. LOCATING DETAILS BY METHOD OF RADIATION.
- 2) Locating details with plane table by method of intersection.
- 3) Understanding the components of Theodolite and their functions, reading the vernier and temporary adjustments of theodolite.
- 4) Measurement of Horizontal angle by transit theodolite.
- 5) Measurement of Horizontal angle by method of Repetition.
- 6) Measurement of vertical angles by theodolite.
- 7) Measurement of Magnetic bearing of a line using theodolite.
- 8) Measurement of deflection angle by taking open traverse of 4 –5 sides.
- 9) To find Reduced levels and horizontal distances using theodolite as a Tacheometer.
- 10) To find constants of a given Tacheometer.
- 11) Study and use of 1 second Micro Optic Theodolite for measurement of Horizontal and Vertical angles
- 12) Study of E.D.M. for knowing its components.
- 13) Use of EDM for finding horizontal and vertical distances and reduced levels.
- 14) Determine the geographical parameters by total station.

#### List Of Projects:

- Plane table survey project for 5-6 sided traverse and locating details of buildings, Roads etc. by radiation and Intersection method, Sheet to be drawn by each student separately on A-1 size imperial drawing sheet.
- 2) Theodolite traverse Survey for a closed traverse of 5-6 sides for a small area. Computation by Gale's traverse table. Plotting the traverse with details on A1 size imperial drawing sheet.
- Setting out simple circular curve by Rankine's method of Deflection angles for a given problem and plotting the details of curve on A-1 size imperial drawing sheet

Calculate design parameters.

#### Motor Skills:

- 1. Observe the phenomenon during testing of specimen.
- 2. Draw the graphs and diagrams.

### List of Practical:

#### Group - A (Any Six)

- 1. Identify the components of universal testing machine & tension test on mild steel.
- 2. Tension test on tor steel / deformed bars.
- 3. Izod Impact test on mild steel, brass, copper and cast iron.
- 4. Charpy impact test on mild steel, brass, copper and cast iron.
- 5. Flexural test on timber.
- 6. Flexure test on floor tiles or roofing tiles.
- 7. Shear Test on metal.
- 8. Water Absorption & Compression test (Dry & Wet) on bricks
- 9. Abrasion Test on flooring tiles.

**Rationale:** 

Data Structure is a subject which deals with data and their structures. In system programming, application programming, the method and techniques of data structures are widely used. This study of data structure helps the students in developing logic & structured programs.

#### **Objective:**

After completion of this course student will be able to:-

- Understand and use the process of abstraction using a programming language such as 'C'.
- Analyze step by step and develop algorithm to solve real world problems.
- Implementing various data structures viz. Stacks, Queues, Linked Lists, Trees and Graphs
- Understanding various searching & sorting techniques

	Contents : Theory	Hrs/week	Marks
Unit -1	<b>BASIC CONCEPTS OF DATA REPRESENTATION:</b> Abstracting data types: Fundamental and derived data types, Primitive data structures.	[03]	
Unit -2	<b>INTRODUCTION TO ALGORITHM DESIGN AND DATA STRUCTURES:</b> Design and analysis of algorithm: Algorithm definition, comparison of algorithms, Analysis of Algorithm; Frequency count, Complexity measures in terms of time and space.	[05]	
Unit -3	ARRAYS: Representation of arrays: single and multidimensional arrays. Address calculation using column and row major ordering. Various operations on Arrays, Application of arrays: Matrix multiplication.	[06]	
Unit -4	STACKS AND QUEUES: Representation of stacks and queues using arrays and linked-lists, Circular queues, Priority Queue	[06]	
Unit -5	LINKED LISTS: Singly linked list; operations on list. Linked stacks and queues, Circular linked lists, doubly linked lists	[08]	
Unit -6	<b>TREES:</b> Binary tree traversal methods: Preorder, In-order, Post-order traversal. Recursive and non-recursive Algorithms for above mentioned Traversal methods. Representation of trees and its applications: Binary tree representation of a tree.	[07]	
Unit -7	SEARCHING, SORTING AND COMPLEXITY: Searching: Sequential and binary searches Sorting: selection, bubble, Quick, merge.	[08]	
Unit -8	<b>GRAPHS:</b> Graphs representation: Adjacency matrix, Adjancy lists, Traversal Schemes: Depth first search, Breadth first search.	[07]	
	Implementation of Strategies:		
	- To implement the methods of data structure, C is found to be appropriate language.		
	- The student/teacher has to study/teach data structures and their methods using C.

#### **Rationale:**

The subject will help the students to learn facts, concepts, principle and procedure of digital electronics. These techniques can be used for designing sequential and combinational circuits which forms the basis of any electronic device. Also, this subject is designed to give clear idea about working principles of 8085 microprocessor.

#### **Objective:**

The objective of this subject is to enable the students to know basic concepts of digital electronics and familiarity with available chips. After undergoing this course the students will have the awareness of various arithmetic circuits, counter design, registers, A/D and D/A converters, semi-conductor memories, multiplexers and de-multiplexers etc.

#### **Rationale:**

C++ is an object-oriented language, which enables a programmer to write programs, so that the object can be made to work collaboratively to produce the solution to live problems. By undergoing this course, the students will be able to understand the principles of object oriented programming, write programs in C++ and use them to make small application programs.

#### **Objective:**

The objective of the course is to make the students understand the basic concepts of object-oriented programming language C++ (Classes, Objects, Inheritance and Polymorphism).

- The Course will enable the students to:
  - Understand OOPs concepts.
  - Use of various C++ constructs and functions.
  - Use of C++ to develop programs to solve the real world problems.

- Implementing Inheritance, Encapsulation, Operator Over-loading and Dynamic Binding in C++.

- C++ Streams and concept of exception handling, class libraries, fundamentals of Microsoft foundation classes.

	Contents : Theory	Hrs/week	Marks
Unit -1	<b>INTRODUCTION TO OBJECTS ORIENTED PROGRAMMING (OOP):</b>	[04]	
	- Basic concept of OOPs		
	- Comparison of procedural programming and OOP		
	- Advantages of OOP, OOP Languages		
	- Definitions: Class, Objects		
	- Concepts of inheritance and encapsulation		
	- Operator overloading		
	- Dynamic binding		
	- Overview of OOP using C++		
	- Basic program construction: main and functions, Program statements,		
	class declaration, comments.		
Unit -2	ELEMENTS OF C++ LANGUAGE:	[10]	
	- Tokens and Identifiers: Character Set and Symbols, Keywords, C++		
	Identifiers		
	- Variables and Constants: Integers & Characters, Constants and Symbolic		
	constants, Dynamic initialization of variables, reference variables,		
	enumerated variables		
	- Data Types: Basic data types, arrays and strings, user defined data types		
	- Operators: Arithmetic, relational operators and operators precedence,		
	logical operators, manipulators, type conversions and type cast operators		
	- Console I/O: cin, cout functions		
	- Control Statements: The <i>if</i> statement, <i>if-else</i> ; <i>else if</i> switch statements		
	- Loops: for and do-While statements, Break, continue, go to		

Unit -3	FUNCTIONS:	[08]	
	- Simple functions: Declaration of functions, calling functions, function	L. J	
	definition		
	- Passing arguments and returning values: Passing constants and variables,		
	pass by value		
	- Return statement, types of functions		
	- Passing and returning structure variables		
Unit -4	OBJECTS AND CLASSES:	[08]	
	- Declaration of classes and objects in C++, Class definition		
	- Declaration of members, objects as date, time, objects as functions		
	arguments		
	- Array of objects		
	- Returning objects from function		
	- Structures and classes		
Unit -5	CONSTRUCTORS AND DESTRUCTORS:	[06]	
	- Basic constructors, parameterized constructors, multiple constructors		
	- Dynamic initialization of objects		
	- Use of copy constructor		
	- Dynamic constructors		
	- Destructors		
	- Constraints on constructors and destructors	50.03	
Unit -6	OPERATOR OVERLOADING:	[08]	
	- Overloading unary operators: Operator keyword, Argument and return		
	values, Laminations of increment operators		
	- Overloading binary operators: Arithmetic operators, Examples: Addition		
	Arithmetic assignments operators		
	Arithmetic assignments operators		
	between object and basic types. Conversion between objects of different		
	classes		
Unit 7	DEDIVED CLASSES AND INHEDITANCE.	[08]	
Unit -7	- Derived classes and Base class: Defining a derived class. Accessing the	[00]	
	hase class members. The protected access specifier		
	- Derived class constructors		
	- Overriding the member functions		
	- Class hierarchies: Abstract base class. Constructors and member		
	functions		
	- Inheritance: Public and private inheritance.		
Unit -8	POINTERS:	[08]	
	- Addresses and Pointers: The address of operator & Pointer variables,		
	Accessing the variable pointed to Pointer to void		
	- Pointer and Arrays		
	- Pointers and Functions: Call by value, Call by reference, pointer to		
	functions, passing function to another function		
	- Pointers and strings: Pointer to string constants, strings as function		
	arguments, Arrays of pointers to strings		
	- Pointers to objects, Pointers to pointers.

**Rationale:-**

For the design of an Information System, it is important to understand the requirements, carry out system study and analyze information. After undergoing this Course, the student will be able to study, analyze and design a system for the user. **Objective:-**

The Course focuses on the following aspects of Information System Development:

- Study, Analysis and Design of a System
- Documenting and evaluating the System
- Data Modeling
- Developing Information Management System for an Organization
- Implementing and Testing

	Contents : Theory	Hrs/week	Marks
Unit -1	<b>INTRODUCTION:</b> System Definition and Concepts: General Theory systems, Manual and automated systems, Real-life Business Sub-systems. System Environments and Boundaries	[05]	
Unit -2	SYSTEMS ANALYST: Role and Need of Systems Analyst, Qualifications and responsibilities	[04]	
Unit -3	<b>SYSTEM DEVELOPMENT CYCLE:</b> Introduction to Systems Development Life Cycle (SDLC), various phases of SDLC: Study, Design, Development, Implementation, Maintenance.	[07]	
Unit -4	<b>SYSTEM PLANNING:</b> Data and fact gathering techniques: Interviews, Group Communication – Questionnaires, Presentation & Site Visits. Modern Methods for determining system requirements: Joint Application, Development Program, Prototyping, Business Process Re-engineering.	[05]

Problems bas	ed on topics taught in Theory classes as per instruction and guidance of the teacher concerned.	Hrs/week	Marks
Unit -1	- Construct an ER diagram for a bank database that shows the basic relationship among customers, checking account, saving account, loans and bank branches where various accounts and loans are taken out. You also want to keep track of transactions on accounts and loans and maintain the current balance in each account and balance on loan. Remember that each entity in ER diagram represent a simple file of data of which you want to keep track. Construct DFD showing the functional view of the system.	[]	
Unit -2	- Construct an ER diagram for a car insurance database that includes data about customers (car owners), cars, and accidents, drivers involved in accident, and injured driver and/or passenger. Note that any customer can insure many cars, each car may have different drivers at different times, and accidents typically involve one or more cars. Convert this into DFD.	[]	
Unit -3	- A clinic is in the business of providing dental services to the patient. A number of doctors are on rolls of the clinic. Patients can take the appointments on the phone or personally for a particular doctor and particular services. Clinic sends reminders to patient and appointment schedule to the doctor one day in advance. At due date and time the patient performs the visit for the appointment to get the services performed on him. At the time of performing services doctor asks the clinic for patient's last record (if any) and what ever services he has performed and informs the clinic so that the records can be updated.	[ ]

#### Rationale:

Electronics is a major part of our day to day life. In each and every field electronic systems are used. Basic electronics is one of the subjects which are the base of all advance electronics. It starts with PN junction which makes the student to follow the functioning of all semiconductor based electronics. This is a core group subject and it develops cognitive and psychomotor skills.

#### <u>Rationale</u>

This paper is meant to make the students familiar with widely used IC chips and the solid state devices such as FETs. The utility of Electronic Devices depends on circuits. Students are to study amplifier and oscillator circuits of different type meant for various applications and specific uses.

The topics to be covered are:

	<b>Contents : Theory</b>	Hrs/week	Marks

## Skills to be developed:

### **Intellectual Skills:**

- 1. Analytical Skills.
- 2. Identification

### **Motor Skills:**

- 1. Measurement Skills.
- 2. Connection Skills.

### List of Practical's:-

- 1) a) To identify the constructional parts of D. C. machine.
  - b) To plot the O.C.C. of a given d. c. machine and to find critical resistance.
- 2) To find the performance of d. c. series & shunt motor by conducting load test
- 3) a) To control the speed of d. c. shunt motor above and below normal speed.

b) To reverse the direction of rotation of d. c. motor.

- 4) a) To identify the constructional details of 1-phase and 3-phase transformer.
  - b) Visit to maintenance and repair workshop of a transformer and prepare a report.
- 5) To measure the performance of single phase transformer by direct loading and to find transformation ratio.
- 6) To measure the performance of single phase transformer by conducting O.C. and S.C. test.
- 7) To identify terminal polarity of corresponding phases of 3-phase transformer & to calculate transformation ratio.
- 8) To compare 1-phase auto transformer with two winding transformer by collecting literature from local dealer/manufacturer & compare the data on following points.
- Weight of iron, weight of copper, turns ratio, efficiency & percentage regulation.
- To observe the phase difference between primary & secondary voltage of 3-phase transformer for various vector groups.

#### Rationale:-

Digital System has made great in roads in the field of Electronics. The use of Digital Circuits is rapidly increasing in all most all the electronic applications, to be it microprocessors, Computers, Communications, Measuring instruments and others.

#### **Objectives:-**

This paper is to deal with the basics of Digital System. The students are expected to learn the Binary System, Conversions from one System to another, the various Logic Circuits, Digital ICs and connected basic Digital Circuits used in Electronic field.

	Contents : Theory	Hrs/week	Marks
Unit -1	Binary System	[08]	
	01.01 Transistor in cut off and saturation.		
	01.02 Binary Numbers. 01.03 Number Base Conversion		
	01.04 Heyadecimal		
	01.05 Compliments: 1's 2's 9's and 10's compliments its application signed		
	binary number, weighted and non-weighted codes.		
	01.06 Codes: Weighted and non-weighted codes.		
Unit -2	Boolean Algebra and Logic Gates	[06]	
	02.01 Basic Definition of Boolean Algebra, Axioms of Boolean Algebra.		
	02.02 Basic theorem and properties of Boolean Algebra.		
	02.03 Boolean functions, Canonical and standard forms.		
	02.04 Logic Gates, Universal logic gates and its application.		
Unit -3	Simplification of Boolean Function	[05]	
	03.01 Theorem and K-map methods up to variables.		
	03.02 Product of sum and sum of product simplification.		
	03.03 NAND and NOR implementation.		
	03.04 Don't care conditions.		
Unit -4	Digital Integrated Circuits	[06]	
	04.01 Introduction to following: RTL, DTL, TTL, ECL, MOS, CMOS,		
	Transmission gate circuits.		
Unit -5	Combinational Logic	[12]

### **RATIONALE:-**

The students are well conversant with the electric and magnetic field and circuit, electro-magnetic induction, D.C. and A.C. circuits, based on related electric and magnetic theories. They also know about electrical components and materials, Now the Electrical Machine is being introduced for IVth Semester Diploma in Electrical & Electronics Engineering to impart the knowledge of D.C. & A.C. machines, which play vital roles even in this era of electronics in different industries throughout the world.

The topics of requisites and construction of D.C. machines, generators, D.C. & A.C. motors, converters, special motors and electro plating have been included in the content. Which will give full insight of electrical equipments in their practical life.

Topics have been divided into sub-topics in order to facilitate the students to understand the subject matters properly. Tentative no. of lectures have been allotted for each topic and sub-topic, so that the whole syllabus may be covered easily in the academic year.

### **OBJECTIVES :-**

The thorough study of these topics will enable the students know fully about D.C. machines, their operation, maintenance and proper connection and hence will enable him to work as a good supervisor and also to efficiently monitor the works of operators under him. The topics of special motors used and that of electroplating will provide full insight of practical use of electrical equipments.

### RATIONALE:-Objectives

The topics to be covered are:-

Contents : Theory			Marks
Unit-1	Network Parameters	[07]	
	01.01 Active and Passive Elements.		
	01.02 Linear and non-linear elements.		
	01.03 Unilateral and Bilateral Elements.		
	01.04 Lumped and Distributed Elements.		
	01.05 Ideal and Practical Voltage and Current Sources.		
	01.06 Concept of Nodes, Mesh, Branch, Loop etc.		
Unit-2	Two Port Network	[12]	
	02.01 Introduction to Z, Y and ABCD parameters.		
	02.02 Equivalent Circuits in Z, Y, ABCD, h parameters.		
	02.03 Transfer function, Concept and Calculation for two port		
	network.		
	02.04 Four Terminal Networks.		
	02.05 Symmetrical and Asymmetrical Networks.		
	02.06 Image and Iterative Impedance.		
	02.07 Design of Simple Symmetrical and Asymmetrical networks.		
	02.08 Propagation Constant.		
	02.09 T and Pai Network.		
	02.10 T to Pai to T network transformation.		
	02.11 Ladder and Lattice Network.		
Unit-3	Attenuator and Equalizers	[04]	
	03.01 Symmetrical and Asymmetrical Networks.		
	03.02 Design of T and Pai type attenuators.		
	03.03 Equalizers - Introduction.		
Unit-4	<u>Filters</u>	[08]	
	04.01 Concept of Decibel and Neper.		
	04.02 Basic Relations in Filters.		
	04.03 Classification as per use: Low Pass Filters, High Pass Filters,		
	Band Pass Filters and Band Stop Filters.		
	04.04 Attenuation and phase shift characteristics.		
	04.05 Design of simple T and Pai type in derived filters.		
Unit-5	Transmission Lines	[19]	
	05.01 Classification.		
	05.02 Introduction to open wire, co-axial cable, wave guide, optical		
	fibers with application.		
	05.03 Distributed parameters of lines.		
	05.04 Equivalent Circuit of a finite line.		
	05.05 T and Pai type representation of a section of line.		
	05.06 Voltage and Current distribution in an infinite line.		

05.07	Characteristics impedance a TX line.		
05.08	Concept of propagation, attenuation constant and phase shift		
	constant of a line.		
05.09	Expression for impedance at a point on line.		
05.10	Reflected and standing waves.		
05.11	Voltage reflection coefficient and VSWR.		
05.12	Maximum and Minimum impedance.		
05.13	Input and Output impedance of an open and short-circuited loss-		
	less line.		
05.14	Input impedance as a function of length of line.		
05.15	Introduction to Smith Chart and Circle Diagrams.

#### **Rationale and Objectives**

Library Personnel Management is increasingly getting integrated with the strategic Management at corporate level. At any Library sector Library Personnel Management and development has assumed great importance. Library Personnel Management has become a driving force in success of an enterprise.

The Management of Library Personnel is a very complicated and challenging task for those who are involved with successful running of an organization. This subject given Considerable Knowledge of Various aspect of Personnel "Management" i.e. Administration, Training & development Accounting etc.

#### Rationale

Recognition of the role of information as a vital input for development necessitates an adequate library and information infrastructure for the efficient and effective function of National development system. Such as a structure requires plans, design, organize, manage and operate a wide range of library and information centres. It is the tuff task to select appropriate information at appropriate time. This paper is to give suitable knowledge about area.

#### **Objective**

- To select appropriate Media.
- To Recognized each aspect.
- To processed it.
- To preserve it.
- To give appropriate and latest service.

#### <u>Topic</u>

- Book Selection
- Information Selection
- Source Selection

#### **Rationale and Objectives**

The paper has been specially designed to train the candidates for rendering personal, expeditions and to the point answer right at the counter. Reference section of a library deals with its clients face to face therefore the man at this section should be always ready to help his clients in his document research. He should act as a Guide in the library and should be able to direct the reader to other sources of knowledge beyond the four walls of his own library.

Keeping in view of these expectations from a Librarian the following topics have been incorporated:

#### **Rationale and Objectives**

Like all other commercial institutions, Management is the the key word in Library and Information Science. It demands a continuous managerial ability of a man at the controlling points.

The course structure has been designed to groom a candidate with the basis of management at this stage to incorporate planning, directing, organizing, staffing and the ability to coordinate the works of a library at every point.

#### **Rationale and Objectives**

The Course of Library Automation and Networking has been planned to train a candidate for the purpose of automated acquisition, technical processing, automated circulation, etc. Various library software available in the present day form the backbone of this training. One, among the available software should be taken up for training of automation and networking of libraries.

Automation of Library ensures automated service to the clients as well as automated in-house library work. Automation envisages training of knowledgeable technicians.

#### **Rationale and Objectives**

The rational of the practical course content envisages treating in accordance with the present and future requirementes of Library

Service with the help of innovated technical findings of the modern Time.

#### **Curriculum**

- Sl. Topies
- **1.** Introduction to the software package
- 2. Hands on Practic.
- 3. Library Networking Model

Chapter	Nar	ne of the Topic	Hours	Marks
Unit-1	Fur	idamentals and types of Mechanisms :		
	1.1	Kinematics of Machines: - Definition of Kinematics, Dynamics, Statics,		
		Kinetics, Kinematic link, Kinematic Pair and its types, constrained motion		
		and its types, Kinematic chain and its types, Mechanism, inversion, machine		
		and structure.	_	
	1.2	Inversions of Kinematic Chain :	12	14
		121 Inversion of four har chain counled wheels of Locomotive &		
		Dontograph		
		122 Inversion of Single Slider Crenk shain Deterry I.C. Engines		
		1.2.2 Inversion of Single Sinder Grank chain- Rotary I.C. Engines		
		mechanism, whitworth quick return mechanism, Crank and Slotted		
		1.3.3 Ackerman's Steering gear mechanism.	-	
		1.3.4 Foot operated air pump mechanism.		
Unit-2	Vel	ocity and Acceleration in Mechanism :		
	2.1	Concept of relative velocity and relative acceleration of a point on link,		
		angular velocity and angular acceleration, inter- relation between linear and angular velocity and acceleration.		
	2.2	Drawing of velocity and acceleration diagram of a given configuration,	09	09
		diagrams of simple mechanisms. Determination of velocity and acceleration		
		of a point on link by relative velocity method [Excluding coriollis components of acceleration]		
	2.3	Analytical method [no derivation] and Klein's construction to determine		
		velocity and acceleration of different links in single slider crank mechanism.		
Unit-3	Can	ns and Followers :		
	3.1	Concept, definition and application of Cams and Followers.		
	3.2	Classification of Cams and Followers.	08	08
	3.3	Different follower motions and their displacement diagrams like uniform		
	24	velocity, STIM, uniform acceleration and Ketardation.	1	
	3.4	without offset with reciprocating motion (graphical method).		

	Total	64	70
	<ul> <li>7.1 Concept of balancing. Balancing of single rotating mass. Graphical method for balancing of several masses revolving in same plane.</li> <li>7.2 Concept and terminology used in vibration, causes of vibrations in machines, their harmful effects and remedies.</li> </ul>	03	03
Unit-7.	Balancing & Vibrations :		
	<ul><li>6.8 Bearings – i) Simple Pivot, ii) Collar Bearing, iii) Conical pivot.</li><li>Torque &amp; power lost in friction (no derivation). Simple numericals.</li></ul>		
	i) Single plate clutch, ii) Multiplate clutch, iii) Centrifugal Clutch iv)Cone clutch v) Diaphragm clutch. (Simple numericals on single and Multiplate clutch).		
	6.7 Function of Clutch and its application, Construction and working of		
	6.6 Clutches- Uniform pressure and Uniform Wear theories.		
	6.5 Construction and working of 1J Kope Brake Dynamometer, 11J Hydraulic Dynamometer, iii) Eddy current Dynamometer.		
	brake.		
	6.4 Numerical problems to find braking force and braking torque for shoe & band		
	expanding shoe brake iv) Disc Brake.		
	6.2 Construction and working of i) shoe brake, ii) Band Brake, iii) Internal		
	comparison between brakes and dynamometer.	12	14
01110-0	6.1 Function of brakes and dynamometer, types of brakes and Dynamometers,		
Unit 6	Prokos Dynamometers Clutches & Possings		
	Governors. 5.3 Comparison between Flywheel and Governor		
	5.2 Governors - Types, concept, function and application & Terminology of		
	significance.	06	06
	Coefficient of fluctuation of energy, coefficient of fluctuation of speed and its	6.4	
	5.1 Flywheel - Concept, function and application of flywheel with the help of turning		
Unit-5	Flywheel and Governors :		
	<ul><li>4.5 Rope Drives – Types, applications, advantages &amp; limitations of Steel ropes.</li></ul>		
	selection for different application, train value & Velocity ratio for compound,		
	4.4 Gear Drives – Spur gear terminology, types of gears and gear trains, their		
	4.5 Chain Drives – Advantages & Disadvantages, Selection of Chain & Sprocket wheels, methods of lubrication.	14	10
	maximum power transmission( Simple numericals)		10
	of lap, belt length. Slip and creep. Determination of velocity ratio, ratio of tight side and slack side tension, centrifugal tension and initial tension, condition for		
	4.2 Belt Drives - flat belt, V– belt & its applications, material for flat and V-belt, angle		
	4.1 Types of Drives – Belt, Chain, Rope, Gear drives & their comparison.		
Unit-4	<b>Power Transmission :</b>

### **CONTENTS : PRACTICAL**

#### Practical: Skills to be developed:

### Intellectual Skill :

- 1. Understand different sources of energy and their applications.
- 2. Understand various concepts and fundamentals of thermodynamics.
- 3. Understand concepts and laws of ideal gasses.
- 4. Understand vapour processes, steam boilers and different mountings and accessories.
- 5. Understand modes of heat transfer and concept of heat exchanges.
- 6. Interpret steam tables, mollier chart and relationship between different thermodynamic properties.

#### Motor Skills :

- 1. Collect and write technical specifications of photovoltaic cells and identify different components on panels of photovoltaic cells.
- 2. Conduct trial on the setup for calculation of thermal conductivity of metal rod
- 3. Trace path of flue gases and water steam circuit in a boiler.
- 4. Conduct trial on solar water heating system.

### List of practical:

- 1. Collection of technical data and specification of photovoltaic cell by referring to manufacturers' catalogues.
- 2. Study and Trial on solar water heating system.
- 3. Report on visit to wind power generation plant / biogas plant / hydraulic power plant.
- 4. Trace the flue gas path and water-steam circuit with the help of boiler model and write a report.
- 5. Report on visit to sugar factory / Dairy / steam power plant with specifications of boiler and list of mountings and accessories.
- 6. Calculation of thermal conductivity of a solid metallic rod.
- 7. Verification of Stefan-Boltzman's law
- 8. Study and compare various heat exchangers such as radiators, evaporators, condensers, plate heat exchangers etc.

Numericals on vapour processes and ideal gas processes (minimum two problems on each)

# **Practical:** Skills to be developed: **Intellectual Skills:**

- 1) Select and use appropriate flow measuring device.
- 2) Select and use appropriate pressure measuring device.
- 3) Analyze the performance of pumps and turbines.

#### **Motor Skills:**

- 1) Use flow measuring device.
- 2) Use pressure measuring device.
- 3) Operate pumps and turbines.

#### List of Practical:

- 1. Calibration of Bourden pressure gauge with the help of Dead Weight Pressure gauge.
- 2. Verification of Bernoulli's Theorem.
- 3. Determination of Coefficient of Discharge of Venturimeter.
- 4. Determination of Coefficient of Discharge, coefficient of contraction and coefficient of velocity of orifice meter.
- 5. Determination of coefficient of friction of flow through pipes.
- 6. Trial on Pelton wheel to determine overall efficiency.
- 7. Trial on centrifugal pump to determine overall efficiency.
- 8. Trial on reciprocating pump to determine overall efficiency.

**Note:** Six hours practical work will be performed during practical examination Student will prepare one jobs from the following list of practicals.

List :

- 1) Electric welding/Gas welding jobs.
- 2) Industrial visit to observe plastic processing shop and report on the visit.
- 3) One job on lathe containing the operations like plain turning, threading, boring, taper turning.
- One job on CNC lathe containing the operations like plain turning, taper turning and curvature. (Group of two students, each group must use different program for different job dimensions)
- 5) One job containing drilling, milling, reaming, gear cutting (spur gear) per job max. two students.
- 6) One job containing surface grinding / cylindrical grinding for tolerances

± 30 micron,(For the job already made on milling machine /lathe).

- 7) One assignment on accessories & attachment chucks, mandrels, carrier and catch plates rests, face plate and angle plate, grinding attachment used on lathe.
- 8) One assignment on accessories & attachment, work holding & tool holding devises used on milling machine.
- 9) One assignment each on shaper, planer, boring machine, broaching machine.
- 10) Fittings related jobs.

One assignment on types of grinding wheels.

#### Rationale (Stenography English):-

The performance of the personnel working in modern offices depends, to a large extent, on the proficiency with which they can take dictation. Many of the confidential matters have to be written in shorthand before final communication is sent to different quarters/ parties. It is necessary that students acquire an accurate and good speed of shorthand so that they are able to perform in the modern offices effectively. Through accessories of courses on stenography these skills can be imparted to the students. Hence the introduction of the subject in the curriculum of Modern offices Practice.

#### **Rationale & Objective:**

Every printed product consists of text portion and illustrations, with the former occupying mechanical portion knowledge of text setting methods and equipment used for setting text, which is broadly termed Letter Assembly, therefore very essential.

The aim of this subject is to study letter assembly as an important part of print-production techniques, to enable the students to make judgment about the aspect of printing, particularly in relation to the requirements of designing the printed products.

This will cover development of typesetting methods, preparation for type setting inputs and outputs, page assembly, proofing imposition and planning.

The aim is to further develop the student's understanding and knowledge of letter assembly equipment, particularly in the areas of on-line integrated system, image generation system, editing and corrections, electronic page assembly, digital storage and outputs.

#### **Rationale & Objective:**

Even printed product should be designed before it is send to the printers or executing the work. The pront-technician should have a clear perspective of the design principles involved in designing a product, as the designing on the printing process to be decided. The aim of this subject will be to introduce the study of printed products, introduction to type and typography, design method, design organisation, visual studies, techniques of copy preparation, layouts and dummy for all kinds of jobs.

The aim is to further examine in details to design consideration and corporate design planning applied to different types of products, and to allow the students to apply the knowledge gained in the professional carrier.

**Rationale:** Yarn preparation and weaving calculation is one of the main activities for diploma holder technician in Textile Engineering. He is required to handle the yarn preparatory machines, tools and equipments and also supervise the yarn preparatory processes. He is also required to perform calculations regarding weaving. The subject is introduced to develop the understanding of yarn preparatory processes and weaving Calculation. It will help in discharge of his duties in the world of work as he can understand a problem, analyse the same and take an appropriate decision as and when the job demands.

Objectives: After Completion of the courses, student will be able to

- Define the terminologies related with yarn preparatory machines and process like winding, pirn winding, Warping, Section Warping, Mill Warping, Sizing, Beaming and looming.
- Explain the principle and working of the machine
- Sketch the machine parts and label them and process of production and their related problem
- Calculate Heald count, Reed count, Weight of Warp and Weft, loom shed efficiency and production, etc.

Machine design, main working members and operating principle of non-automatic windin
machines – upright spindle winding machine, Drum winding machine.
Merits and demerits of upright spindle winding machine.
Machine design, main working members and operating principles of high speed winding
and super speed winding, automatic cone and cheese winding.
High speed winding – Schlathorost high speed cheese winding, Roto corner high speed cone
winding, Auto corner high speed cone winding, Precision cone and cheese winding, Schweit
High speed winding machine.
Merits and demerits of high speed and super speed winding.

**Rationale**: The subject covers information about textile fibres, their structural and physical properties like length, fineness, tensile property etc. along with experimental methods to determine them. The knowledge of these topics are very much useful in process control and testing of textile fibres to control yarn and fabric properties.

### **Objectives:**

- Learning the various testing methods for the measurement of the fibre properties.
- The student will be able to measure the properties and draw an appropriate conclusion.

#### Rational:-

Textile chemistry is one of the main activities for a diploma holder technician in textile Engineering. He is required to apply different types of dyes on different types of textile fibre, printing and wet processing. He must be well versed with the subject of textile chemistry.

### **Objective**

- After completion of the course student will be able to -
- Define the terminologies related with textile chemistry
- Explain the principle and working of the dyeing and printing processes
- Methods of application of dyes.
- Understand wet processing like singeing, Desizings, Scouring, Bleaching. Mercerization and their related problem.

**Rationale**: Study of fabric manufacture i.e. weaving is incomplete without the knowledge of fabric structure. This subject is aimed at educating student about more elaborate weaves like Plain, Twill, Satin, Honeycomb, Bedford Cord, Pique which are used in furnishing. Also this subject deals with concept of colour and weaves effect, which is very important in Textile Designing.

## MAN MADE FIBRE TECHNOLOGY

### **Rationale :**

Fabric made of man made Fibres are much in demand because of its durability and easy maintenance. The production, therefore, of the man made fibres has increased keeping the pace with market demand. This course deals with the study of various concepts and technologies used in manmade fibre manufacturing process.

### **Objective:**

Students will be able to understand :-

- Process of manufacture of Viscose Rayon, Cellulose Acetate, Polynosic rayon, Polyamide fibres, Polyesters, Polyvinyl Chloride, Orlon, Acrilian, Polypropyline.
- Their chemical behaviour, the properties of the fibres and their uses.
- The application of the process, properties, chemical behaviour in actual manufacturing of the man made fibres.

### Rational:-

Diploma holder technician in Textile Engineering is very frequently required to dye the fabric, Scouring and bleaching of fabrics and printing of fabrics.

The Course is introduced to develop the skill to dye the cellulosic material with Direct, Acid, Basic, sulphur, scouring and bleaching of cotton, silk, wool, Printing of natural fibre for letter understanding of the subject.

#### **Objectives:-**

- The students will be able to develop skill for -
- Scouring and Bleaching of cotton, silk, wool
- Dyeing of cotton with Direct dyes. -
- Dyeing of Cotton, wool, silk, with basic dyes -
- Dyeing of wool, silk, with Acid dyes Dyeing of Cotton with sulphur dyes -
- -
- Printing of fabric \_

## **Contents : Term Work**

	List of Term Work:-	Hrs/week	Marks
Unit -1	Scouring           01.03         Experimental Scouring of cotton, Wool, silk and other important textile fibres, yarns and fabrics.	06	
Unit -2	Bleaching 01.04 Experimental Bleaching of cotton, Wool, silk and other important textile fibres, yarns and fabrics.	06	
Unit -3	Dveing 03.08Familiarzing and sketching of various tools and machines used in wet processing.03.09Evaluation of inorganic and other substances used in textile processing like soda ash, bleaching powder, hydrogen peroxides, sodium sulphate, hydrosulphate,03.10Dying of three shades with direct dyes on cotton (0.5%, 0.8%, 1.2%, 1.5 %,)03.11Dying of three shades with basic dyes on cotton (0.5%, 1%, 1.3%, 1.5 %,)03.12Dying of three shade with basic dyes on silk, wool, (0.5%, 1.2%, 1.5%, 1.8 %,)03.13Dying of three shade with acid dyes on wool, silk 	33	
Unit -4	Printing         04.06       Practice of block printing on paper and fabrics (cotton, silk)         04.07       Preparation of designs for printing systems.         04.08       Printing paste preparation         04.09       Study the Roller printing machines and practice of them on fabric (cotton, silk)         04.10       Study the screen printing constituents - screen table, screen, exposing unit, washing tray.	15
